Nick-

Eric & Chip are the primary contacts (EPA) for choosing these core (and surface sediment/benthic/tissue/etc.) sampling locations; Rob Neely is the primary NOAA contact for our office's involvement in the Portland Harbor site. As part of NOAA's trustee role in the Superfund remedial process we (NOAA Office of Response & Restoration) provide technical & scientific support to EPA and other government agencies. That said, to the extent possible, I'm happy to answer questions about sampling locations or refer you to the most appropriate member of our team.

Thanks Nick,
Ben

Ben, Erik is out for a couple of days, but I think he was able to load and work with these, thanks. Ben, are you the primary contact for choosing these locations? I may have some questions later this week.

Nick-

Following up- want to make sure that you/Erik able to download/access the files for the subsurface sampling locations that I provided?

Ben

All, attached are EPA's comments on the Sediment Core FSP. A table and figures summarizing locations is also attached. I have included the table as both a pdf and excel spreadsheet. The spreadsheet includes x,y coordinates.

Eric
